

Nutrient Inter-Comparison Voyage

An international nutrient inter-comparison is scheduled for 2022 on RV Investigator. The voyage will take place from **17th May to 3rd June 2022**

The voyage will focus on improving the inter-comparability between seawater macro-nutrient datasets. We aim to quantify and assess the different aspects of nutrient analysis that contribute to discrepancies in results, maintaining a key focus on shipboard analysis.

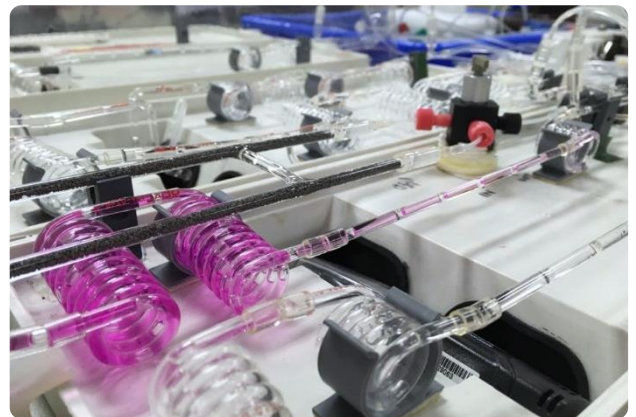

For the purpose of the inter-comparison exercise we are inviting participants from any oceanographic laboratory, allowing them to bring and operate a nutrient analyser on board.

Voyage Information

Voyage dates: Tuesday 17th May through to Saturday 3rd June 2022.

The voyage will be departing from, and arriving in Hobart, Tasmania on Australia's national research vessel RV Investigator. We will sail south of Tasmania to complete CTD deployments on the GO-SHIP repeat transect line SR03.

Participants will be set up to analyse samples and reference materials in parallel. On-board workshops will also be undertaken.

Expression of Interest

An expression of interest form is being used to gauge participation levels

It is available at (or scan the QR code):

<https://bit.ly/2NOGt5t>

Expression of interest forms open through 2020
